

Interactive comment on “Recent seismic activity at Cephalonia island (Greece): a study through candidate electromagnetic precursors in terms of nonlinear dynamics” by S. M. Potirakis et al.

F. Vallianatos

fvallian@chania.teicrete.gr

Received and published: 29 January 2016

I would like to inform authors that the under discussion paper by Potirakis include an application on Natural Time Analysis for the area of Cephalonia which has already been published in Physics and Chemistry of the Earth 85–86 (2015) 201–209, "Multiresolution wavelets and natural time analysis before the January–February 2014 Cephalonia (Mw6.1 & 6.0) sequence of strong earthquake events " by Filippas Vallianatos , Georgios Michas, George Hloupis Article history: Received 22 January 2015, Received in revised form 27 May 2015, Accepted 15 June 2015, Available online 30 July 2015 .

In the present initial, under discussion submission, the authors don't include the re-

C664

quired reference in the above mentioned paper, which has long ago published and where the same topic presented, the same methodology applied, for the same earthquake event, as on the present work of Potirakis et al.,

I kindly suggest the authors to modify their work properly given the merit to the already published work(s).

Dr. Filippas Vallianatos, Prof. of Geophysics & Seismology, UNESCO Chair on Solid Earth Physics & Geohazards Risk Reduction, Technological Educational Institute of Crete
