

Response to review

We would like to thank the reviewer for spotting the various error in the text. All of the highlighted comments have been addressed as was recommended by the reviewer. Another re-reading has also been done to spot any more errors. We would like to comment that previous reviewers had mentioned the d.o.i. and website information in the references was distracting. However, the display of this information is controlled by the Copernicus Bibtex style which we have elected not to edit as per the manuscript preparation guidelines.
