Received and published: 11 October 2017

Dear Dr Choong Hun Shin,

As you’ve already seen I’ve got two reports, both are not favourable and do not recommend the manuscript publication in its present form. However, the referee 1 sees a potential in your work, moreover, he provides detailed constructive suggestions on how the manuscript could be improved. Referee’s 2 focus is on your earlier closely related publications you failed to mention and discuss. This is absolutely unacceptable and is against the basic principles of the journal.

Discussion paper

Nevertheless I am inclined to give you a second chance and to allow you to submit a revised version. In the revised version you have to refer to all earlier versions of this work and to discuss the progress made since the last publication. I realize that one of these works is a conference proceedings type publication, nevertheless you have to discuss it.

Re the essence of the work, you have to make an effort and to present your observations of the Mach stem in a more convincing form. Perhaps the suggestions by Ref. 1 might help.
