

Interactive comment on “Evolution of fractality in magnetized plasmas” by Víctor Muñoz et al.

Anonymous Referee #1

Received and published: 1 September 2017

The central idea of this review is very interesting. However, there is a major problem with the present manuscript. The similarity report showed a very high similarity index (26%) resulting from a single reference (Dominguez et al., 2014)! Unless this issue is resolved I would not be able to perform a thorough review of this manuscript. I would be happy to provide specific comments when a suitably revised version of this paper will be resubmitted.
