We are very grateful for your short comment.

This is an important issue. Thanks for your suggestion, this Introduction (L. 19-21) is indeed misleading because of the inappropriate word “preceded”. In fact, we intended to express the crustal changes have been recorded when some large earthquakes occurred. Therefore, it could provide a great opportunity to study earthquake preparation processes.

In this regard, we modify the Introduction (L. 19-20) as follows:

C1

“Changes in crustal deformation fields over time have been record at least some large earthquakes (Thatcher, W. et al., 1981),...”
