Dear Editor Luciano Telesca,

In order to address previous questions not clearly answered by Reviewer 1 in our manuscript, as well as corrections made by the editor in this paper "Multifractal structure and Gutenberg-Richter parameter associated with high-energy volcanic emissions in Colima, Mexico (years 2013-2015)", we have expanded the explanation regarding the completeness magnitude, as well as the steps we followed for the calculation of the b value for each moving wondow in order to study its evolution. All changes have been marked in red so that they can be clearly seen. We also moved some paragraphs from the Conclusion section to the Discussion section to make the last part of the paper more concise and brief. We hope that the corrections will be sufficient to publish the paper. In any case, we are attentive to improve the work if the editor considers it necessary.

Thank you very much,

Marisol Monterrubio
